FOR IMMEDIATE RELEASE

### **Energetx Composites Announces MEGA Grant Approval**

(June 16, 2009 – Holland, MI, USA) Holland based Energetx Composites is pleased to acknowledge the State of Michigan’s acceptance of a 15 year MEGA Tax Credit beginning fiscal year ending December 31, 2010. Energetx Composites plans to design, engineer, and manufacture wind turbine blades, nacelles and spinners for use in large utility scale turbine applications.

According to Energetx Composites Principal, David Slikkers; “Energetx Composites is uniquely positioned to provide precision engineering and world class manufacturing capacity in an optimal geographic location to effectively supply advanced composites for the growing wind energy industry in Michigan, the Great Lakes and Internationally.” Mr. Slikkers continues, “Capital investment is already starting and we anticipate rigorous employee selection and training activity as the wind energy industry requires; likely to start later in 2009. We remain very impressed with the State of Michigan’s commitment to wind energy manufacturing for the state. The fine professionals at MEDC, DELEG and the Governor’s office are providing outstanding support during a remarkable time in our state.”

Energetx Composites is headquartered in Holland, Michigan. The company is an innovative provider of manufacturing solutions for composite fabrication including engineering, design, tooling, process development, technology and manufacturing assembly. Launched in the summer of 2008, Energetx Composites provides the perfect platform for delivering correct solutions to composite manufacturing needs across a wide range of industries including aerospace, green technology, mass transit and renewable energy.
