FOR IMMEDIATE RELEASE

Energetx and Aeroblade Elevate Relationship – Form Manufacturing Partnership

(May 13, 2010 – Holland, MI, USA) Energetx Composites will continue to fulfill orders for global wind industry OEMs, consistent with the licensing agreement signed with Aeroblade in January; the company is also committed to manufacturing wind turbine blades from 37 to 65 meters for Aeroblade customers in the United States and Canadian markets. Energetx Composite's world class manufacturing capacity will meet current and future market needs and assist Aeroblade in realizing their global blade supply strategy.

Kelly Slikkers, Energetx Vice President of New Product Development notes, "Emerging Energy Research estimates that the US will install 184 GW of new capacity between 2010 and 2020*. This new partnership combining Aeroblade's world-renown design skills, backed by a long history in the aerospace field, with Energetx commitment to quality manufacturing and service will provide unmatched reliability – a perfect choice for wind turbine OEMs within this important growing market."

Both Aeroblade and Energetx Composites will be represented at the WINDPOWER Conference & Exhibition in Dallas, Texas May 23 – 26. Additional details regarding this partnership will be available at that time.
